

WE'RE HIRING!

FIELD SERVICE SPECIALIST

GRANDE PRAIRIE, RED DEER, CALGARY, AB

Under the general supervision of the Service Coordinator and the Station Manager, the Field Service Specialist routinely works at more than one type of well site and provides the planning necessary to successfully support the job, including: equipment set up, well-site direction and customer-related support activities. They troubleshoot challenges and quickly communicate significant decisions with the operations management team.

The successful candidate will setup, test, install, operate, and maintain down-hole tool equipment on location. They will actively participate in and promote Interra's Quality Improvement and Quality Control Process program and will ensure compliance with HSE regulations and guidelines. They are also expected to act as mentors and train other service specialists in their areas of expertise.

Primary Responsibilities

- Installs, operates, maintains and services downhole tools.
- Explains the function of each tool for its specific application.
- Correctly loads out jobs, ensuring that all components pertaining to the job requirements are accounted for.
- Completes all related QA/QC documentation when loading/pressure testing each completion tool component.
- Demonstrates a safe working attitude and complies with Interra's Safety Management System.
- Conducts job safety analysis and toolbox safety meetings on prescribed tasks.
- Trains others on all required job applications, as required.
- Follows Interra procedures for all job types.
- Invoices the customer for all tools and services utilized on location.
- Assembles and disassembles all required down-hole tools as needed.
- Understands and can explain a BHA diagram and basic completion well programs.
- Demonstrates a knowledge of basic rig functions.
- Understands fracturing completion methods.
- Prepare equipment for return to base, including any necessary documentation.
- Able to complete all job documentation efficiently, correctly and on time.
- Demonstrate an understanding of downhole hydraulics.
- Assists with R&D and testing operations when required
- Keeps work areas tidy and organized
- Other duties as assigned
